Michael Grant
Director of Development

Re: Letter of Recommendation

To whom it may concern,

Sławomir Gonet has worked in my team since December 2015. Sławomir joined as one of the first programmers in our company. In this role, his major task for me was taking part in specification of the problem we were trying to solve, researching, designing the solution and finally developing a viable product in Common Lisp. This ended up growing into a large and complex product which required advanced programming skills - and that's what brought him to our team.

As a part of this growth, about two years ago, he took the role of leading developer in a major subcomponent of our risk assessment platform, the high-performant data collection engine specific to our application. Sławomir was again deeply involved in initial planning and research of possible solutions, followed by implementation of the technology demonstrator and initial version of product - all in modern Clojure.

Sławomir's role in our company was not only limited to software development. Thanks to his prior experience, he has also been responsible for the variety of devops and system/network administrator activities. He has designed our internal VPN and put in place several important systems such as Gitlab. Working towards continuous integration / continuous delivery (CI/CD) and QA of the product, he designed Chef and Jenkins based CI setup and he worked on our virtualization to produce OVA/OVF images for delivery. He extended our virtual infrastructure from a single bare metal machine which we were beginning with into automated cloud environments spanning AWS, GCP and Scaleway/Online.net.

Slawomir is an excellent programmer. He has exceptional knowledge, experience, and professionalism and it has been a pleasure to work with. He is good spirited, hardworking, always optimistic, and persistent at finding solutions to difficult problems.
On a personal level he is extremely easy to work with and his English skills are excellent.

I highly recommend Sławomir and would most certainly hire him or work with him again in the future.

Kind regards,

Michael Grant

Vice President of Engineering
